Subject: Re: PREDICT China semi-annual report

Hello all,

Just jumping in to say that we will work with Hongying to enter this training into the EIDITH app ASAP so that it can be included in the annual report, if not the semiannual.

Apologies.

Molly

Hi David,

Thanks for the information, and I apologize for this delayed response as I have been in the field with limited access to the Internet.

It is correct that China hasn't conducted any sampling activities in the past 6 months in Y4, after the completion of Y3 sampling targets, but we just got the contract and will start the sampling work in May to reach the planned target of Y4 (twice per site) by the end of September 2018.

Therefore, the lab team has been focusing on Y3 sample testing in the past 6 months, half of the Y3 samples have been fully tested with results submitted to EIDITH for interpretation, and the rest of testings will be completed by the end of May.

Regarding the training, we did refresh training for individuals that have been updated on EIDITH, but no new staff has been trained in the past 6 months. There was also a training workshop hosted by our partner as reported in the Mission/Partners Updates, with 21 people were trained:

• *PREDICT/China team coordinated The 1st International Workshop on Biosafety Laboratory Management and Experimental Techniques at Wuhan Institute of Virology on 18-28 October, 2017, where PREDICT in-country staff from Thailand, as well as 20 other participants from Asian and African countries, were invited to attend and receive training on laboratory practice for high-level biosafety laboratories.*

I'll leave this to you to decide if this would be included in the report or not, but I didn't find a way to upload this into EIDITH as they didn't use PREDICT protocols/modules for the training. There will also be a lab training event and a human surveillance training event scheduled in May and June.

Hope this can help clarify some of the information mentioned in your email, please do let me know if any further information is needed. Thank you very much.

Best Regards,
Hongying

Hi Peter and team,

We pulled EIDITH data and just completed country dashboards for the semi-annual report today. For China, there were zero changes in the last 6 months from what we reported in the year 3 annual report (this includes training #s, sampling #s, and #s of viruses detected). The only change was in the # of tests performed by labs, which increased considerably so we will expect the viral count to rise for the next report when interpretations are complete and findings approved for release.

For the training and sampling #s however, it's possible data isn't going into EIDITH, but also possible China has completed all capacity strengthening work and sample collection and is just focused on testing and results. We just wanted to clarify so we are in the loop; any insight you can provide is greatly appreciated.

Cheers,

David
